Headquartered in the Washington D.C. metro area, National Cyber Group offers cyber security workforce development and talent solutions by combining the forces of America's most-known name in foundational IT certification training, Total Seminars, and the most hands-on cyber training program, CyberNow Labs, with new job placement and staffing solutions to attract, train and transmit thousands of career-seekers into entry-and-mid-level jobs as the nation's 'Elite Cybersecurity Corps.'

NATIONALCYBER.COM

THE PROBLEM:

THE COLD, HARD FACTS:

- There is a need for 2 million cybersecurity defenders to put a stop to the exploitation of sensitive data – i.e. health, personnel, financial information.
- There is a critical shortage of personnel with appropriate skills.

And if this persists, we'll lose.

OUR SOLUTION:

National Cyber Group (NCG) has taken the high road to engineer a national workforce accelerator that is affordable, accessible, and outcome-oriented.

With the acquisition of Total Seminars and CyberNow Labs in 2022, NCG brings scaled outreach, job placement, community development, and thought leadership to the pressing need for developing an elite corps of cybersecurity professionals to arm our nation against growing threats present in our economy.

We are mission-motivated, enterprising individuals who love America and have together taken initiative to create a nationally needed cybersecurity capability that also changes peoples' lives.

Building the elite cybersecurity corps that can hit the ground running day 1 on the job – trained using real technologies, real networks and real attacks – requires commitment to our cyber code of conduct.

HONOR – self, community, country. It's what America was founded on. We intend to arm our nation against growing digital threats.

EVERYONE – is eligible to elevate their earning potential and answer our nation's critical call to protect and defend.

RESPECT – that it's a learning process and students "get it" when they work the plan. Our support team is committed to their cause.

OUTCOMES – trainees get out what they put in, and with an 80%+ job placement rate, they transform their lives. Employers get prepared cyber pros who make an immediate impact, not just with job-ready skills and Security+ certification, but also with positive attitudes and appreciation to be doing such important work.
